NATIONAL OIL CORPORATION - TENDERS, ALL NOC SUBSIDIARIES (LIBYA) · LIBYA

Al-Waha Oil Libya opens construction services prequalification

Saga deep read · 24 November 2026 · Score 85

Al-Waha Oil Company, a subsidiary of Libya's National Oil Corporation (NOC), has announced a prequalification process for a tender covering construction and maintenance services. The announcement invites interested companies to submit prequalification documentation ahead of a formal tender for the provision of these services at Al-Waha's operations.

Al-Waha Oil Company is one of the NOC's principal producing subsidiaries, operating concessions in the Sirte Basin, one of Libya's most prolific hydrocarbon-producing regions. Construction and maintenance service contracts of this type typically encompass facilities maintenance, structural construction, mechanical and civil works, and associated support services at producing fields and processing infrastructure.

The prequalification stage is a standard procurement step in NOC subsidiary tendering, designed to establish a shortlist of technically and financially qualified contractors before formal bid documents are issued. Companies that successfully pass prequalification will subsequently be invited to tender, making this announcement an early-stage entry point in what will become a competitive procurement process.

Libya's upstream sector has seen a gradual recovery in production capacity in recent years, with the NOC working to restore and expand output from fields across the Sirte Basin and other producing areas. Maintenance and construction services form a critical component of sustaining and growing production, particularly at ageing field

infrastructure that has experienced periods of reduced upkeep. Al-Waha's move to open a fresh prequalification round signals continued operational activity and investment in its producing assets.

Interested service companies are advised to monitor the NOC and Al-Waha procurement channels directly for the release of prequalification questionnaire documents, submission deadlines, and subsequent tender timelines. No contract value, project scope details, or submission deadline were specified in the announcement at this stage.

Why this matters to partners and clients of Saga

Norwegian companies active in oilfield construction, facilities maintenance, and mechanical services should register interest and monitor Al-Waha and NOC procurement portals for the prequalification questionnaire release. This is a monitoring and relationship-building phase; outreach to procurement is appropriate once formal prequalification documents are issued. Companies with prior NOC subsidiary track records will be better positioned for shortlisting.

PARTNER ANGLES

- **Service:** Facilities and mechanical maintenance contractors should prepare prequalification submissions covering HSE, financial standing, and Libyan or regional field service track record.
- **Subsea/FPSO:** Topsides and process facilities maintenance specialists should assess whether Al-Waha's scope includes processing plant or separation infrastructure, which would suit their capabilities.
- **Pipeline:** Pipeline construction and integrity maintenance firms should monitor scope clarification to determine whether gathering and trunk line infrastructure is included in the tender.
- **Drilling:** Drilling infrastructure and wellsite civil construction companies should watch for scope details that may include wellsite facilities or drilling pad construction.
