CCS JV opens EOI for 2,000-bed Afungi labour camp

Saga deep read · 04 November 2026 · Score 62

CCS JV has issued an Expression of Interest seeking contractors for the engineering, procurement, and construction of a 2,000-person accommodation camp at Afungi in Cabo Delgado province, Mozambique. The EOI marks an active procurement step, inviting qualified contractors to register interest ahead of a formal tender process for the labour camp facility.

The Afungi peninsula is the designated onshore hub for Mozambique's northern LNG developments, and a 2,000-capacity camp of this scale signals meaningful workforce mobilisation activity in the area. Labour accommodation infrastructure of this size is typically associated with the construction and commissioning phases of large industrial projects, where peak manning requirements demand purpose-built, managed facilities rather than dispersed commercial lodging.

Cabo Delgado has experienced significant project disruption in recent years due to security conditions, which led to force majeure declarations and activity suspensions across the LNG corridor. The reappearance of active procurement calls for major support infrastructure — such as this EOI — indicates that at least one project proponent or its contractors is planning for a return to meaningful construction activity in the region, though the article does not specify which underlying LNG project or operator the CCS JV is serving in this capacity.

For Norwegian service and supply companies, Afungi-area activity has historically been relevant across multiple disciplines — from modular construction and camp management to logistics, subsea tie-in works, and LNG plant services. A 2,000-person

camp represents a significant operational footprint and suggests the project scope behind it is substantial. Norwegian companies with established LNG or large-scale construction project experience in remote or challenging environments may find this procurement cycle worth monitoring closely, particularly as further tenders are expected to follow if construction-phase planning advances.

Companies should note that this instrument is an Expression of Interest, not a contract award or ratified agreement. It represents an early qualification step, and Norwegian firms or their local partners should consider submitting EOI responses to establish visibility with CCS JV's procurement function. Firms not positioned for direct EPC delivery may still find subcontracting or specialist service roles — in areas such as MEP installation, HSE systems, or camp management — as the tender process matures.

Why this matters to partners and clients of Saga

This is an open EOI, making it an appropriate moment for Norwegian service companies or their local partners to engage directly with CCS JV's procurement process by submitting qualification responses. Companies with modular construction, remote camp EPC, or large-scale workforce accommodation experience in LNG or extractive industry settings should respond now to establish procurement visibility. As subsequent tenders follow, early registration positions Norwegian firms for subcontracting or specialist roles across MEP, HSE infrastructure, and camp operations.

PARTNER ANGLES

- **LNG:** Camp infrastructure at Afungi is a direct precursor to LNG construction-phase mobilisation — Norwegian LNG project services firms should submit EOI responses and monitor for follow-on plant and utilities tenders.
- **Service:** Remote camp EPC and management specialists with extractive-industry references — particularly in conflict-affected or logistically complex environments — are well positioned to respond to the CCS JV EOI.
- **Subsea/FPSO:** While this EOI is onshore, Afungi activity resumption may signal broader project momentum; subsea and offshore contractors should monitor for associated nearshore and marine infrastructure tenders.

- **Pipeline:** Large labour camp mobilisation at Afungi could indicate advancing onshore pipeline and plant construction schedules — pipeline contractors should track CCS JV procurement for follow-on civil and mechanical tenders.
