Mellitah Oil & Gas tenders H_2S monitoring for Libya platforms

Saga deep read · 04 November 2026 · Score 100

Mellitah Oil & Gas B.V. (Joint Ventures Branch) has issued a pre-qualification invitation for the provision of hydrogen sulphide (H_2S) gas monitoring services at offshore drilling and completion operations on the Tarkeeb A and H offshore platforms in Libya. The tender reference is PRQ/JPT/39/26.

The scope covers specialised H_2S gas detection and monitoring during active drilling and completion phases at the two named offshore platforms. Mellitah is seeking contractors that can demonstrate both technical specialisation in H_2S monitoring systems and extensive prior experience in offshore drilling environments. The pre-qualification stage is the first formal step in the procurement process; a full tender invitation will follow for those contractors that satisfy the qualification criteria.

Mellitah Oil & Gas B.V. is a joint venture operating entity with significant upstream activities in Libya, managing several offshore and onshore hydrocarbon assets. The Tarkeeb A and H platforms represent active offshore drilling commitments within the company's portfolio. H_2S monitoring is a safety-critical service in sour-gas well environments, requiring certified equipment, trained personnel, and documented response procedures that meet international offshore safety standards.

The pre-qualification stage requires prospective contractors to submit evidence of relevant technical capability, project references, and organisational competence before being admitted to the formal bidding process. Companies interested in participating must respond to the invitation within the timeframe stipulated by

Mellitah. No contract value or deadline has been disclosed in the publicly available tender notice.

Why this matters to partners and clients of Saga

This is an open pre-qualification invitation — the appropriate action is immediate preparation and submission of qualification documents if the capability exists. Norwegian well-services and drilling-safety companies with certified H_2S monitoring expertise, offshore track record, and ATEX-rated equipment should respond directly to Mellitah Oil & Gas B.V. under reference PRQ/JPT/39/26. Given the sour-gas nature of the scope, companies with North Sea H_2S experience in comparable offshore environments are well positioned to meet the stated criteria.

PARTNER ANGLES

- **Drilling:** Well-services contractors with H_2S monitoring capability and offshore sour-gas references should file a pre-qualification response to PRQ/JPT/39/26 immediately.
- **Service:** Safety equipment suppliers holding certified H_2S detection systems and trained offshore personnel can target Tarkeeb A and H as a direct market entry point into Mellitah's supply chain.
- **Subsea/FPSO:** Companies already providing platform safety services in the Mediterranean should assess whether their existing Mellitah relationships support a teaming arrangement for this pre-qualification.
- **Pipeline:** Contractors experienced in sour-service environments across Libya's offshore infrastructure should monitor this tender as a signal of broader drilling activity on the Tarkeeb field complex.
