Libya NOC Unit Republishes Prequalification Notice PQC-09/2026

Saga deep read · 14 October 2026 · Score 50

Arabian Gulf Oil Company (AGOCO), a subsidiary of Libya's National Oil Corporation (NOC), has republished prequalification notice PQC-09/2026, reopening the vendor qualification process for an unspecified scope of work. The republication indicates that the initial qualification round either attracted insufficient responses or required procedural revision, a pattern common in NOC subsidiary tendering across Libya's constrained operating environment.

The notice originates from NOC's tender channel covering all subsidiary companies, confirming AGOCO as the issuing entity. Beyond the prequalification reference number and the republication status, the available summary does not specify the technical scope, contract category, or submission deadline. Companies seeking to participate would need to obtain the full prequalification document directly from AGOCO or the NOC tender portal to understand eligibility criteria and required documentation.

AGOCO operates primarily in northeastern Libya, managing a portfolio of mature onshore fields in the Sirte Basin. The company has historically engaged international oil-field service providers across drilling, well services, surface facilities maintenance, and oilfield logistics. A prequalification exercise of this nature is typically the earliest formal step in a competitive procurement process, meaning no contract has been awarded and no scope has been publicly confirmed at this stage.

For international service companies, the republication is a signal worth tracking. Prequalification approval is a prerequisite for receiving invitation-to-tender

documents, making timely submission of qualification packages essential for any company wishing to remain in contention. The Libyan market carries well-documented operational and political risk, and prospective vendors should weigh NOC's improving production ambitions — the corporation has publicly targeted output recovery — against the logistical and security complexities of operating in the country. Building relationships with AGOCO procurement and local agents ahead of the formal ITT stage is the recommended course of action at this point.

Why this matters to partners and clients of Saga

This is an active prequalification notice from an NOC subsidiary, making it an appropriate moment for Norwegian service companies with existing Libya exposure or Gulf of Sidra experience to submit vendor qualification packages to AGOCO. Companies not yet registered with NOC's supplier database should prioritise that process now to avoid being locked out when the ITT is issued. Saga Advisory recommends monitoring the NOC tender portal closely and engaging a Tripoli-based local agent to obtain the full PQC-09/2026 document and confirm the technical scope.

PARTNER ANGLES

- **Drilling:** AGOCO operates mature Sirte Basin fields requiring ongoing workover and drilling services — prequalification now secures ITT eligibility for any forthcoming rig or well-services contract.
- **Service:** Well integrity, production chemicals, and oilfield maintenance providers should submit qualification packages promptly, as AGOCO's republication suggests urgency in rebuilding its approved-vendor list.
- **Pipeline:** Surface pipeline rehabilitation and integrity inspection firms active in North Africa should register interest, given AGOCO's ageing onshore infrastructure in the Sirte Basin.
- **Subsea/FPSO:** Relevance is limited at prequalification stage without confirmed offshore scope, but companies with shallow-water Mediterranean credentials should monitor for scope clarification in the ITT.
