Zallaf Libya tenders Erawin Field workshop fit-out

Saga deep read · 26 December 2023 · Score 64

Zallaf Libya Oil & Gas has issued Tender No. ENG-136-2023, calling for the supply and installation of a fully equipped workshop at its Erawin Field. The tender represents an open procurement opportunity for contractors capable of delivering field-based workshop infrastructure in Libya's upstream oil and gas sector.

The Erawin Field is operated by Zallaf Libya Oil & Gas, a state-affiliated upstream company active in Libyan hydrocarbon development. The scope of this tender, as stated in the notice, covers both the supply of workshop equipment and its physical installation at the field site. No contract value, timeline, or detailed technical specifications are disclosed in the available tender notice.

Libya's upstream sector has seen incremental recovery in operational activity, and field-level infrastructure investments such as this workshop fit-out reflect operators' efforts to build out permanent, functional support capacity at producing assets. A fully equipped field workshop typically underpins maintenance, fabrication, and repair activities essential to sustained production operations, though the article does not specify the intended use beyond the general description.

For Norwegian service companies tracking North and West African opportunities, this tender sits at the lighter end of the procurement spectrum — it is a direct field services and equipment supply call rather than a major capital project. The opportunity is nonetheless concrete: a signed tender notice from a named operator with an identifiable scope. Companies with experience supplying field workshop packages, modular workshop units, or associated tooling and lifting equipment to

upstream operators in challenging operating environments may find this a practical entry point into the Zallaf supply chain.

Interested parties should engage directly with Zallaf Libya Oil & Gas to obtain the full tender documentation, qualification requirements, and submission deadlines, as these details are not included in the published notice summary.

Why this matters to partners and clients of Saga

This is an open tender from a named Libyan operator, making it an actionable procurement opportunity for relevant suppliers. Norwegian companies offering modular field workshop solutions, industrial equipment packages, or upstream field infrastructure services should request the full tender documentation from Zallaf directly. It also serves as a low-barrier entry point for companies seeking to establish a supplier relationship with Zallaf ahead of larger Erawin Field scopes.

PARTNER ANGLES

- **Service:** Companies supplying modular workshop units, field maintenance equipment, or turnkey workshop fit-out packages to upstream operators should register with Zallaf and request ENG-136-2023 tender documents.
- **Drilling:** Drilling and well services contractors already operating in Libya can use this tender as a touchpoint to expand their Zallaf vendor registration ahead of larger rig or wellsite service scopes.
- **Pipeline:** Pipeline and integrity service firms with field fabrication and repair workshop capabilities may find this scope aligned with their asset maintenance service lines in North African upstream.
- **Subsea/FPSO:** Less directly relevant, but FPSO and offshore-focused companies with Libyan onshore ambitions can monitor Zallaf tenders like this to track the operator's procurement cadence and build early relationships.
